CLASSIC & ELEGANT

ARSHAMTRADE.COM

About ArshamTrade

Arsham Trading Company is a global sourcing and distribution specialist with over a decade of import/export experience. From our operational hub in Yerevan, Armenia, established in 2016, we manage a worldwide logistics network. We specialize in the supply of a diverse, high-quality collection of lamp bases for the international market. Our primary goal is to be a reliable partner for our clients, ensuring customer satisfaction through superior products and efficient distribution.

**Arsham
Trade**

Connecting You
To Global Markets

A stunning landscape deserves to be seen, even after the sun goes down. Our collection of standing lights are more than just a source of light. They are a key element in transforming your outdoor space into a captivating and secure retreat.

- **The Magic of Light**

Imagine your garden bathed in a soft, welcoming glow. Our standing garden lights create a magical ambiance, highlighting your garden's best features, from a striking fountain to a favorite tree. They turn your pathways into inviting promenades and add depth and character to your landscape, allowing you to enjoy your outdoor haven long into the night.

- **Why Our Standing Lights?**

Safety and Security: Illuminate your garden with a consistent, reliable light source. Our lights minimize tripping hazards, brighten dark corners, and create a safer environment for you and your guests. This not only increases peace of mind but can also act as a deterrent, keeping your property secure.

Beauty and Value: The right lighting elevates your garden's aesthetic and enhances your home's curb appeal. By artistically illuminating key elements, our lights add visual interest and can significantly increase the value of your property, making your home more attractive to potential buyers.

Durability and Versatility: Crafted from high-quality materials like bronze, aluminum, and steel, our lights are built to withstand all weather conditions, ensuring they provide consistent, long-lasting performance. With a wide range of designs—from classic and rustic to modern and minimalist—you can find the perfect style to complement your unique garden.

- **Key Features:**

- **Diverse Designs:** Choose from a wide selection of styles, materials, and finishes to perfectly match your garden's theme, whether it's classic, modern, rustic, or Japanese.
- **Optimal Performance:** Our lights are compatible with energy-efficient LED bulbs, including COB, RGB, and PAR types, giving you full control over color, brightness, and focus.
- **Easy Installation:** Designed for low-voltage systems and simple setup, our lights are easy to install. For a professional finish, we recommend working with an electrician.
- **Low Maintenance:** Built to last, our lights require minimal upkeep. A simple cleaning and occasional check of connections will keep them shining brightly for years to come.

Enhance your home beauty and safety with our exquisite collection of standing garden lights. Discover the perfect blend of form and function and bring your outdoor space to life.

Pressurized Die-Casting Unit

- Die-casting is done by inserting molten metal into the cavity of the mold under high pressure. The production of very thin and also with very high resistance is almost impossible using other casting methods.
- The casting machine is a high-strength steel mold that consists of several ducts. These ducts are used for melting several pieces at the same time. A release agent is applied to lubricate and remove the part.
- Then the cylinder is filled with molten metal until it is inserted into the mold cavities with a piston. The piston continues the pressure until the melt completely fills the mold.
- When the metal is sufficiently cooled, the casting machine separates it from the mold and it cleans the angles and sharpness of each piece separately. Then each part is specially machined.
- The advantages of die-casting include as follows, the possibility of producing complex parts / the part produced by die-casting has a good surface finish and does not require subsequent machining operations and is extremely economical due to the operation / having more resistance and...

Grinding

- It is a chipping process that removes excess material from the piece. Each of the abrasive grains changes the shape of a small part of the work piece and makes the piece smooth and polished. Grinding is usually the final stage of work on the part, after which, the quality of the surface is increased and it is actually a kind of surface finishing.

Welding

- It is one of the best and oldest methods used in the industry to connect two parts. This process, according to the type of materials used or the place where it is performed, puts different solutions in front of engineers and technicians who deal with welding in some way.

Dryer, Finishing and Polishing Vibration Machine

- The vibration process or the final production processes (Finishing Process) is carried out by the Vibration Machine to clean the pleats, fats and oxides on the parts, as well as their final polishing is done in mechanized basis. After the pleating operation, the polishing operation is done to make the parts smooth and uniform, and at the end, the parts are transferred to another machine which is a dryer. The drying of the parts is made after the vibration process in order to prevent oxidation of the parts.

The IP Lamp

- stands for Ingress Protection which means protection against penetration.
- This is a classification that classifies light fittings (and many others) for their appropriateness for use in various locations.
- This classification is based on how water or dust can reach the place of positioning of the lamp.
- When choosing of lighting products and LED lights for any project, the degree of ingress protection or IP is of paramount importance.

Electrostatic Powder Paint

- No need to solvent is one of the most important reasons for the popularity of furnace paint among craftsmen and industrialists. Paint solvent harms human health by producing toxic gases in the environment. Furnace paint also creates less pollution than liquid paints. Electrostatic powder paint is used to cover metallic and non-metallic surfaces. For this purpose, the paint is first sprayed on the desired product using a special gun (similar to a pistol). Then the product is heated in special industrial ovens at a temperature between 180 and 220 degrees Celsius. The magnetic load in the furnace paint will make the surface of the product uniform and integrated.

Polycarbonate

- The property of bubbles of this production unit are made of polycarbonate. Polycarbonate has high strength, hardness, heat resistance, excellent dimensional condition and stability in color. Polycarbonate is an ideal and widely used material in the industry due to its diverse characteristics of compatibility with the environment and being recyclable.
- Polycarbonates maintain their strength at the temperatures between -20 and 140 degrees Celsius and cannot be broken. This high strength and resistance against strike and scratch creates safety and eases the processes that requires high performance and reliability for use.

HEXAGON-CH/B/T

- Lamp consumption source: E27
- Property of Body: Die-cast aluminum
- Property of bubble: Glass
- Color of body: ● ● ●
- Body coating: electrostatic power paint
- Power: 30 W
- Input Voltage: AC220V/50HZ
- IP degree of Protection: 44
- Screw: Steel

DIYANA

- Lamp consumption source: E27
- Property of Body: Die-cast aluminum
- Property of bubble: Polycarbonate
- Color of body: ● ● ●
- Body coating: electrostatic power paint
- Power: 30 W
- Input Voltage: AC220V/50HZ
- IP degree of Protection: 55
- Screw: Steel
